

Hospital Data Analysis Dashboard

HMS Dashboard Report | Excel Data Analysis Project

1. Dashboard Overview

This dashboard provides a visual overview of hospital data, focusing on patient counts, billing amounts, visit types, payment methods, and monthly patient trends. It is designed to support quick understanding of hospital activity and financial patterns.

2. Key Dashboard Findings

Metric	Dashboard observation
Patients by department	Cardiology has 30 patients; Dermatology 22; Neurology 25; Orthopedics 25; Pediatrics 23.
Bill amount by department	Cardiology shows the highest bill amount at 401,200, followed by Orthopedics at 371,300.
Visit type	OPD represents 65% of visits, Emergency 18%, and Admission 17%.
Payment method	Cash represents 54% of bill amount, Card 33%, and Online 13%.
Monthly patients	The dashboard shows 78 patients in September and 47 in October.

3. Department Analysis

The patient-count chart shows Cardiology with the highest number of patients among the displayed departments. The billing chart shows Cardiology and Orthopedics contributing the largest displayed bill amounts, while Pediatrics and Dermatology have lower totals.

4. Visit Type Analysis

The visit-type chart indicates that OPD is the largest category at 65% of displayed patient visits. Emergency accounts for 18% and Admission for 17%. This suggests that outpatient activity makes up the largest share of the displayed visit mix.

5. Payment Method Analysis

Cash accounts for 54% of the displayed bill amount, followed by Card at 33% and Online at 13%. These figures describe the payment-method distribution represented in the dashboard.

6. Monthly Trend

The monthly chart displays a decrease from 78 patients in September to 47 patients in October. This is a two-month comparison in the current dashboard and should not be treated as a long-term trend without additional months of data.

7. Tools Used

Microsoft Excel, Pivot Tables/Pivot Charts, dashboard visualization, charts, and interactive filtering elements.

8. Conclusion

The HMS dashboard converts hospital records into a visual summary that can help users review patient activity, departmental billing, visit types, payment methods, and monthly volume. The project demonstrates practical skills in data organization, analysis, and visualization using Excel.
